

Feature-rich Solutions Provide Time-lapse, Site Security and Marketing

THE PROJECT

The Live Well project in San Diego, CA is approximately 4 acres and consists of a two-storey office building and a four-storey parking garage. The project has two time-lapse cameras, each facing one of the buildings, and two security cameras. One security camera faces the building and another faces our jobsite trailer and entrance.

For this project, footage was required for both security and marketing purposes. With no need for power or Wi-Fi for connectivity, installation of the cameras was simple and easy.

THE BENEFITS

- **Real-time progress monitoring** — The system provides for real-time remote monitoring to ensure productivity expectations are being met even when you can't be on-site.
- **Complete turnkey solution** — This easy to deploy solution includes the solar-powered camera, LTE cellular connectivity and cloud-based software and service
- **Marketing & Public Relations** — "A picture is worth a thousand words." Savvy firms utilize automated time-lapse video and public URLs to market and promote their work quality, environmental responsibility and completed projects.

"Sensera is very competitive in price and had more features than other cameras. Sensera was very helpful in addressing our needs. They took the time to provide us with a layout and field-of-view plan for our site so we could ensure we were getting the coverage we needed."

—Kristen Ridgers, Project Engineer, PCL Construction

THE PROJECT MANAGERS

Lisa BonDurant - Team Lead, System Administrator
Kristen Ridgers - Project Engineer
